

Part of **THE CASTLE GROUP** team, SBS has bridged the gap between product vision and reality. You no longer have to go through the hassle of numerous contractors . . . . One call does it all! With our ability to use in-house personnel for all engineering, construction, and management the cost and construction times for the project are significantly reduced.

Hydro-Marine Construction Co., Inc., our construction company, was responsible for the construction and construction management from the start of the project, including any site preparation, to final installation. The bridge was built in accordance with all AASHTO and DOT standards. Construction of the bridge was completed in one week and the estimated cost was \$98,500.00 including engineering, foundation, equipment, man power, etc. Our bridge design won the “Best Small Bridge” by the New Jersey Quality Initiative.

Our Company(s) were retained to design and construct a new bridge to replace a deteriorated bridge in Salem County, New Jersey. Several site visits were performed to verify site conditions and determine the best design for the project. W.J. Castle, P.E. & Associates, P.C., our engineering company was responsible for all engineering from preliminary design to final design. Since this bridge provided access to a development, time was an issue with this bridge. This 24’-0” timber bridge was constructed into two modules and shipped to the site, ready for installation.
